PROFESSIONAL SUMMARY

Third-year Computer Science and Engineering student at CMR University with an interest in software development, full-stack web development, and AI-powered applications. Comfortable working with Python, Java, JavaScript, and React through coursework and self-directed projects. Motivated to build practical, well-structured software while continuing to learn modern development tools and practices. Currently exploring AI-assisted development and clean, usable interfaces.

EDUCATION

B.Tech in Computer Science and Engineering

CMR University | Third Year | Ongoing

TECHNICAL SKILLS

Languages: Python, Java, C, C++, JavaScript

Web Development: HTML, CSS, React

Tools & Platforms: Git, GitHub, Visual Studio Code

Hardware: Arduino, Raspberry Pi

AI & Data: Retrieval-augmented generation (RAG), AI-assisted development

SELECTED PROJECTS

AetherOS

A modular AI assistant platform organised around a shared core and independent capabilities. The architecture keeps individual modules separate so the system can grow without redesigning the whole application.

Technologies: AI; modular architecture

AI Study Material Analyzer

An AI-powered study analysis project that applies retrieval-augmented generation (RAG), retrieving relevant context first and using it to support analysis of study material.

Technologies: RAG; AI

Smart Expense Splitter GitHub

A Java application for dividing shared costs between people, built around the everyday problem of keeping group expenses clear and fair.

Technologies: Java

Attendance Marks Analyzer GitHub

A Python project that analyses attendance and marks data, bringing two related academic datasets into a single view.

Technologies: Python
